Imperial House, Kingsway, London, W.C.2; 23, Abingdon Street, London, S.W.1;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

or 120, George Street, Edinburgh;

or through any Bookseller.

1924

Price 2s. 6d. net.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual Rates for the 13 weeks ended 29th March 1924.

Table VI. shows, for the 157 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 31st March 1924.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 29th March 1924. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Table VIIa. shows the local distribution of the cases of small-pox notified during the 13 weeks ended 29th March, 1924.

Note.:—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates while that for the quarter ending 31st December contains also a summary of certain figures for the year.

NOTES ON THE FIRST QUARTER OF 1924.

ENGLAND AND WALES.

Births.

The Births registered in the *First* Quarter of 1924 numbered 185,486 and were 7,049 more than in the preceding Quarter, but 7,484 fewer than in the corresponding Quarter of 1923. The Illegitimate Births totalled 7,488, or 379 fewer than in the first Quarter of 1923.

Of these 185,486 Births 94,772 were males and 90,714 females, giving a proportion of 1,045 males to 1,000 females; the average proportion in the 10 preceding first Quarters was 1,046.

The Births registered in the Quarter correspond to an annual rate of 19·4 per 1,000 of the estimated population in the middle of the year 1923. This is the lowest birth-rate recorded in any first quarter except during the period of the war.

Deaths.

The Deaths registered numbered 160,279 and were 45,495 more than in the preceding Quarter, and 35,559 more than in the corresponding Quarter of 1923. They included 79,706 males and 80,573 females, corresponding to an annual rate of 16·7 per 1,000 estimated population and a proportion of 989 males to 1,000 females.

Influenza was stated to be either a primary or contributory cause of deaths in 12,604 cases, or 7·9 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 102 per 1,000, this being 8 per 1,000 below the average of the 10 preceding first Quarters.

Urban Mortality.

The highest death-rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows:—

From *measles* 0·69 in Tottenham, 0·80 in London, 0·85 in West Ham and 0·93 in Stockport; from *scarlet fever* 0·12 in Middlesbrough, 0·15 in Carlisle and 0·16 in Norwich and in Stoke on Trent; from *whooping cough* 1·09 in Wigan, 1·36 in York, 1·42 in Middlesbrough and 2·71 in Stockton on Tees; from *diphtheria* 0·22 in Carlisle, 0·23 in West Ham, 0·24 in Merthyr Tydfil and 0·25 in Bristol; and from *influenza* 3·25 in Stockton on Tees, 3·40 in Hastings, 3·44 in Middlesbrough and 4·03 in South Shields.

The highest death-rates per 1,000 Births from *diarrhœa and enteritis* among children under two years of age were 15·6 in Acton and in Wakefield, 16·8 in Middlesbrough, 20·9 in Aberdare and 22·2 in Doncaster.

Small Pox.

Three fatal cases of small pox were registered during the quarter; 2 deaths belonged to East Dean and United Parishes R.D. (Glos.) and 1 to Stapleford R.D. (Notts).

A supplementary table (VIII. a) showing the distribution of the cases of small pox notified during the Quarter is given on p. 24.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 25,207, as against 80,306, 42,046 and 68,250 in the first Quarters of 1921, 1922 and 1923.

NOTES ON MARRIAGES.—Fourth Quarter, 1923.

The number of *persons* married in the *fourth* Quarter of 1923 in England and Wales was 153,412, a decrease of 21,138 from the number in the preceding Quarter, but an increase of 222 above that in the corresponding Quarter of 1922. The number corresponds to an annual rate of 15·8 per 1,000 enumerated population.

UNITED KINGDOM.—Third Quarter, 1923.

In Great Britain and Ireland 240,309 births and 117,049 deaths were registered in the three months ended 30th September 1923. The natural increase in population was therefore 123,260. The number of persons married was 206,974.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars General.

METEOROLOGY.*

JANUARY, 1924.

Mild, dull and rainy weather characterised the opening days of the month. Subsequently the temperature fell and winds became light so that ground frosts were general and there was much fog. On the 8th and 9th south-easterly and easterly gales were experienced in many parts of the country and there was general snowfall. Mild weather was experienced from the 18th to the 26th. The weather was mainly fair, with occasional local fog or drizzle, throughout the month. Temperature was everywhere above the normal and precipitation was in excess with the exception of the north-west. Sunshine was somewhat in excess of normal in most parts of the country.

FEBRUARY, 1924.

During the first week of February westerly winds and mild weather prevailed. High southerly winds and gales were experienced on the west coasts on the 8th. Subsequently there was a decided fall of temperature associated with easterly winds. After the 14th the wind varied between north and west but remained cold. A deep depression on the 29th gave high winds or gales in all parts of the country. Temperature was everywhere below normal. Sunshine and precipitation were deficient.

MARCH, 1924.

The first few days were very cold. Snow and hail occurred in many parts of the country and snow lay to a depth of several inches

* Furnished by the Director of the Meteorological Office.

in places. Subsequently there was a change to fine sunny weather with a gradual increase of day temperatures; the nights, however, continued cold. Sunshine was abundant and in conjunction with the light winds prevalent after the 6th gave wide daily ranges of temperature about the middle of the month. Little rain fell between the 6th and the 20th and an absolute drought prevailed at a good many stations. After the 20th south-westerly winds with mild rainy weather were experienced in the south; in the north snow or hail occurred. The last week was colder. The prevailing winds were N or NE. Sunshine was everywhere above the normal and temperature everywhere below the normal. Rainfall was very deficient, the percentage of the normal for the country as a whole being only 58.

* Excluding non-civilians.

† The populations except that of Belfast which relates to civilians only are total populations and relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

Price 2s. 6d. net.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual Rates for the 13 weeks ended 28th June 1924.

Table VI. shows, for the 157 Smaller Towns. the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 30th June 1924.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 28th June 1924. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Table VIIa. shows the local distribution of the cases of small-pox notified during the 13 weeks ended 28th June, 1924.

*Note:—*The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates while that for the quarter ending 31st December contains also a summary of certain figures for the year.

NOTES ON THE SECOND QUARTER OF 1924.

ENGLAND AND WALES.

Births.

The Births registered in the *Second* Quarter of 1924 numbered 187,157 and were 1,671 more than in the preceding Quarter, but 9,674 fewer than in the corresponding Quarter of 1923. The Illegitimate Births totalled 7,915, or 104 fewer than in the second Quarter of 1923.

Of these 187,157 Births 95,748 were males and 91,409 females, giving a proportion of 1,047 males to 1,000 females; the average proportion in the 10 preceding second Quarters was 1,046.

The Births registered in the Quarter correspond to an annual rate of 19·5 per 1,000 of the estimated population in the middle of the year 1923. This is the lowest birth-rate recorded in any second quarter except during the period of the war.

Deaths.

The Deaths registered numbered 114,176 and were 46,103 fewer than in the preceding Quarter, but 136 more than in the corresponding Quarter of 1923. They included 58,980 males and 55,196 females, corresponding to an annual rate of 11·9 per 1,000 estimated population and a proportion of 1,069 males to 1,000 females.

Influenza was stated to be either a primary or contributory cause of deaths in 4,178 cases, or 3·7 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 69 per 1,000, this being 13 per 1,000 below the average of the 10 preceding second Quarters.

Urban Mortality.

The highest death-rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows:—

From *measles* 0·97 in Chester, 1·13 in West Hartlepool, 1·58 in Manchester and 2·16 in Salford; from *scarlet fever* 0·13 in Norwich and 0·15 in Warrington; from *whooping cough* 0·43 in Salford, 0·47 in York, 0·48 in Birkenhead and 0·80 in Middlesbrough; from *diphtheria* 0·18 in Ealing and in Derby, 0·20 in Cambridge, 0·37 in Carlisle and 0·38 in Gloucester; and from *influenza* 1·21 in Halifax, 1·44 in Wigan, 1·61 in Burnley and 2·34 in Rochdale.

The highest death-rates per 1,000 Births from *diarrhœa and enteritis* among children under two years of age were 13·1 in Manchester, 13·6 in Preston, 15·1 in Dudley, and 18·3 in Barnsley.

Small Pox.

Seven fatal cases of small pox were registered during the quarter; 2 deaths belonged to Middlesbrough C.B., 2* to Willesden U.D. (Middlesex), 1 each to Ashington U.D. (Northumberland) and Hucknall U.D. (Notts), and 1 on the Plymouth Port Sanitary Hospital Ship of an apprentice whose home address was in Stockton on Tees U.D. (Durham).

* These deaths were registered on 30th June and do not therefore appear in Table V.

A supplementary table (VIII. *a*) showing the distribution of the cases of small pox notified during the 13 weeks ended 28th June, 1924, is given on p. 24.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 72,981 as against 116,832, 80,222 and 82,791 in the second Quarters of 1921, 1922 and 1923.

NOTES ON MARRIAGES.—First Quarter, 1924.

The number of *persons* married in the *first* Quarter of 1924 in England and Wales was 93,990, a decrease of 59,422 from the number in the preceding Quarter, and 12,572 below that in the corresponding Quarter of 1923. The number corresponds to an annual rate of 9·8 per 1,000 estimated population in the middle of the year 1923, which is the lowest rate recorded in any quarter since the establishment of civil registration.

UNITED KINGDOM.—Fourth Quarter, 1923.

In Great Britain and Ireland 227,306 births and 145,806 deaths were registered in the three months ended 31st December 1923. The natural increase in population was therefore 81,500. The number of persons married was 180,784.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars General.

METEOROLOGY.*

APRIL, 1924.

The weather of April was generally cloudy and cool with the exception of a spell of warm sunny weather at Easter. During the first week cool northerly winds prevailed with only slight precipitation, partly in the form of sleet and hail. On the 7th it was warmer, but bad weather again supervened and rain fell repeatedly from the 8th to the 14th. Snow, sleet and local thunderstorms were also experienced. From the 16th to the 21st it was sunny and warm. Subsequently the weather deteriorated and the last few days of the month were rough, with rain, local gales and thunderstorms. The mean temperature was about 1°F. below normal; rainfall was mainly in excess and sunshine everywhere deficient.

MAY, 1924.

The weather of May was generally dull, with excess of rain, largely associated with thunderstorms, which were of frequent occurrence. Dull, cold and showery weather, with occasional bright intervals, prevailed up to the 9th. During the next few days fair weather alternated with dull and rainy conditions. On the 14th an improvement occurred, and for the first time in the month temperature exceeded 70°F locally. After a few days unsettled weather recurred, but a warm spell was experienced from the 25th to the 28th, with

* Furnished by the Director of the Meteorological Office.

temperatures of 70°F and over in south-east England. Heavy rain and local thunderstorms were experienced at the end of the month and heavy floods occurred in some of the midland counties. Mean temperature was in excess of normal, the excess being nearly 3°F. in eastern England. Sunshine was generally deficient.

JUNE, 1924.

The weather of June was generally dull and unsettled. During the first fortnight unsettled and rainy conditions prevailed, but about the 14th there was a change to warmer and drier weather with, however, a good deal of cloud in some parts. Temperature subsequently rose gradually, but local thunderstorms with heavy rain in places occurred on the 17th. From the 19th onwards the weather in the south-east continued fair and warm with very little rain; but in the north-west unsettled and rainy weather was maintained. With the exception of the north-east and east mean temperature was everywhere below normal. Sunshine was again deficient.

* Excluding non-civilians.

† The populations except that of Belfast which relates to civilians only are total populations and relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

† Including 2 deaths from Small-pox.

* For statistics of other Colonial and Foreign Cities during the First Quarter of 1924, see Quarterly Return for that period.

† The deaths in this column relate to all ages for Bombay, Christiania, and Budapest, and to children under 15 for Copenhagen, Stockholm, Gothenburg, the German Cities, Cairo, and Alexandria.

‡ Including 178 and 169 deaths from Plague in Bombay, and from Asiatic Cholera 1 and 2 in Bombay, and Madras.

§ Including deaths from Croup in Bombay, Paris, Amsterdam, Copenhagen, the German Cities, Vienna, Prague, Budapest, Warsaw and New Orleans.

|| The estimated population and deaths refer to the civilian population only.

¶ The registration of Births in Bombay is incomplete.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual Rates for the 13 weeks ended 27th September 1924.

Table VI. shows, for the 157 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 30th September 1924.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 27th September 1924. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Table VIIIA. shows the local distribution of the cases of small-pox notified during the 13 weeks ended 27th September 1924.

SPECIAL TABLES.

The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates, that for the quarter ending 30th September tables relating to summer mortality from diarrhoea and enteritis and that for the quarter ending 31st December a summary of certain figures for the year.

NOTES ON THE THIRD QUARTER OF 1924.

ENGLAND AND WALES.

Births.

The Births registered in the *Third* Quarter of 1924 numbered 186,648 and were 509 fewer than in the preceding Quarter, and 3,414 fewer than in the corresponding Quarter of 1923. The Illegitimate Births totalled 7,538, or 483 fewer than in the third Quarter of 1923.

Of these 186,648 Births 95,693 were males and 90,955 females giving a proportion of 1,052 males to 1,000 females; the average proportion in the 10 preceding third Quarters was 1,047.

The Births registered in the Quarter correspond to an annual rate of 19·3 per 1,000 of the estimated population in the middle of the year 1923. This is the lowest birth-rate recorded in any third quarter except during the period of the war.

Deaths.

The Deaths registered numbered 90,155 and were 24,021 fewer than in the preceding Quarter, and 1,095 fewer than in the corresponding Quarter of 1923. They included 46,705 males and 43,450 females, giving a proportion of 1,075 males to 1,000 females.

The Deaths registered in the Quarter correspond to an annual rate of 9·3 per 1,000 of the estimated population in the middle of the year 1923; this is the lowest recorded death-rate in any quarter.

Influenza was stated to be either a primary or contributory cause of deaths in 545 cases, or 0·6 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 53 per 1,000, this being 25 per 1,000 below the average of the 10 preceding third Quarters, and the lowest rate recorded in any quarter since the establishment of civil registration.

Urban Mortality.

The highest death-rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows:—

From *enteric fever* 0·96 in Luton; from *measles* 0·44 in Stoke-on-Trent, 0·49 in Oldham, 0·56 in St. Helens and 0·69 in Rochdale; from *scarlet fever* 0·11 in Rotherham, 0·12 in Walsall and 0·21 in Wimbledon; from *whooping cough* 0·20 in West Ham and in Liverpool, 0·24 in Burton-upon-Trent, 0·26 in Birkenhead and 0·34 in Bootle; from *diphtheria* 0·13 in Norwich, 0·14 in Luton, 0·30 in Derby and 0·56 in Walsall; and from *influenza* 0·18 in Tyne-mouth and 0·19 in Burnley.

The highest death-rates per 1,000 Births from *diarrhœa* and *enteritis* among children under two years of age were 30·4 in Birkenhead, 32·1 in Barnsley, 58·4 in Rotherham and 59·2 in Sunderland. Special tables relating to summer mortality from *diarrhœa* and *enteritis* are inserted in the present Return (Tables IX. and X.).

Small Pox.

Two fatal cases of small pox belonging to Willesden* U.D. and Barnsley C.B., respectively, were registered during the quarter.

* Two of the 3 deaths in Willesden in Table V were registered in the June Quarter (see footnote p. iii of the previous Quarterly Return, No. 302).

A supplementary table (VIII. *a*) showing the distribution of the cases of small pox notified during the 13 weeks ended 27th September, 1924, is given on p. 24.

Typhus.

Eight cases of this disease were notified and 4 deaths were registered in St. Helens C.B. during the 13 weeks ended 27th September, 1924.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 96,493 as against 115,710, 104,791 and 98,812 in the third Quarters of 1921, 1922 and 1923.

NOTES ON MARRIAGES.—SECOND Quarter, 1924.

The number of *persons* married in the *second* Quarter of 1924 in England and Wales was 162,346, an increase of 68,356 compared with the number in the preceding Quarter, and 12,488 more than the number in the corresponding Quarter of 1923. The number corresponds to an annual rate of 17·0 per 1,000 estimated population in the middle of the year 1923, which was 1·3 per 1,000 above that in the *second* Quarter of last year but 0·6 per 1,000 below the average rate in the corresponding Quarter of the 10 preceding years.

UNITED KINGDOM.—First Quarter, 1924.

In Great Britain and Ireland 235,996 births and 203,544 deaths were registered in the three months ended 31st March 1924. The natural increase in population was therefore 32,452. The number of persons married was 120,464.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars General.

METEOROLOGY.*

THIRD QUARTER, 1924.

JULY.

The most striking features of the weather of July were the severe local thunderstorms and general heavy rains. At the beginning of the month the weather was generally cool and unsettled with widespread thunderstorms on the 3rd and 4th. On the 9th a spell of fine warm weather set in and temperature rose gradually until the 12th, which was the hottest day of the year in most places. On the 17th, however, heavy rain and local gales were widely experienced in the South of England. Subsequently the weather was cool and unsettled, with heavy local rains and numerous thunderstorms.

* Furnished by the Director of the Meteorological Office.

Temperature was slightly above normal in north-east and eastern England, below normal elsewhere. Rainfall was appreciably in excess everywhere. Sunshine was in excess in eastern England and the midland counties, and deficient in western England and in Wales.

AUGUST.

The weather during August was mainly cool and unsettled with westerly winds. The beginning of the month was wet generally but from the 6th to the 10th bright, fair weather prevailed, several stations registering 13 and 14 hours of bright sunshine daily. During the remainder of the month the weather was unsettled with frequent rainfalls. High winds or gales occurred in the English Channel and elsewhere on the 17th. Temperature was 1°F or 2°F below normal; rainfall was slightly in excess, except in north-east and eastern England. Sunshine was everywhere deficient.

SEPTEMBER.

Unsettled weather, with heavy rain at times, prevailed throughout the greater part of the month. From the 2nd to the 5th the weather was cloudy and rain fell on most days, but the amounts were mainly moderate or slight. Heavy rain fell generally on the three succeeding days, and thunderstorms also occurred in many parts of England. From the 10th to the 19th south-westerly winds, strong at times, prevailed with frequent heavy rain. There were, however, some bright days. High winds or gales occurred after the 19th, notably on the night of the 20th to 21st. Bright sunshine and heavy rain alternated until the 25th, after which there was fine weather until the evening of the 28th, when wet weather again set in. Temperature was above normal generally, rainfall markedly in excess of normal. Sunshine was deficient everywhere.

* Excluding non-civilians.

† The populations except that of Belfast which relates to civilians only are total populations and relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter

‡ Including 3 deaths from Small-pox

or through any Bookseller.

1925

Price 2s. 6d. net.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual Rates for the 14 weeks ended 3rd January 1925.

Table VI. shows, for the 157 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 31st December 1924.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 14 weeks ended 3rd January 1925. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Note :—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates, while that for the quarter ending 31st December contains also a summary of certain figures for the year. (See page iv.)

NOTES ON THE FOURTH QUARTER OF 1924.

ENGLAND AND WALES.

Births.

The Births registered in the *Fourth* Quarter of 1924 numbered 170,995 and were 7,428 below the number recorded in the corresponding Quarter of 1923. The Illegitimate Births totalled 6,786, or 481 fewer than in the fourth Quarter of 1923.

Of these 170,995 Births 87,366 were males and 83,629 females, giving a proportion of 1.045 males to 1,000 females; the average proportion in the 10 preceding fourth Quarters was 1.051.

The Births registered in the Quarter correspond to an annual rate of 17.5 per 1,000 of the estimated mid-year population. This rate is 0.9 per 1,000 below that recorded in the corresponding quarter of 1923, and was the lowest birth-rate recorded in any quarter except during the war years 1917 and 1918.

Deaths.

The Deaths registered numbered 108,660 and were 18,505 more than in the preceding Quarter, but 6,120 less than in the corresponding Quarter of 1923. They included 55,332 males and 53,328 females, corresponding to an annual rate of 11.1 per 1,000 of the estimated population and a proportion of 1.038 males to 1,000 females. The general death-rate was the lowest recorded in any fourth Quarter since the establishment of civil registration.

Influenza was stated to be either a primary or contributory cause of deaths in 1,549 cases, or 1.4 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 75 per 1,000, this being 5 per 1,000 above the rate for the fourth quarter of 1923, but 15 per 1,000 below the average of the 10 preceding fourth Quarters.

Urban Mortality.

The highest death-rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows:—

From *enteric fever* 0.17 in Tynemouth; from *measles* 0.73 in Hull, 0.96 in Barnsley, 1.20 in Stoke-on-Trent, and 3.33 in Wigan; from *scarlet fever* 0.17 in Middlesbrough, 0.19 in Warrington, 0.20 in Northampton and 0.21 in Carlisle; from *whooping cough* 0.30 in West Ham, 0.32 in Northampton, 0.37 in Walthamstow and 0.38 in East Ham; from *diphtheria* 0.28 in Stockton-on-Tees and in Derby, 0.32 in Luton and 0.52 in Walsall; from *influenza* 0.45 in South Shields, 0.47 in West Hartlepool, 0.52 in Blackburn and 0.59 in Bolton.

The highest death-rates per 1,000 Births from *diarrhæa and enteritis* among children under two years of age were 23.7 in South Shields, 30.2 in Wakefield, 34.3 in Salford and 39.6 in Sunderland.

Small Pox.

One fatal case of small pox belonging to Chesterfield R.D. was registered during the quarter.

A supplementary table (VIII. a) showing the distribution of the cases of small pox notified during the Quarter is given on p. 24.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 62,335, as against 77,337, 66,285 and 63,643 in the fourth Quarters of 1921, 1922 and 1923.

NOTES ON MARRIAGES.—Third Quarter, 1924.

The number of *persons* married in the *third* Quarter of 1924 in England and Wales was 179,576 an increase of 17,230 over the the number in the preceding Quarter, and 4,998 more than that in the corresponding Quarter of 1923. The number corresponds to an annual rate of 18·4 per 1,000 of the estimated mid-year population.

UNITED KINGDOM.—Second Quarter, 1924.

In Great Britain and Ireland 239,412 births and 149,009 deaths were registered in the three months ended 30th June 1924. The natural increase in population was therefore 90,403. The number of persons married was 188,812.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars General.

SUMMARY, 1924.

The Summary relating to the year 1924, giving the principal Tables published up to 1912 in the "Annual Summary," will be found on pages 26-42 of this publication, the Tables being numbered IX-XVI.

ENGLAND AND WALES.

According to the quarterly returns furnished by local registrars, 730,286 births and 473,270 deaths were registered in England and Wales in the year 1924. The natural increase of population, by excess of births over deaths, was, therefore, 257,016, the average annual increase in the preceding five years having been 335,352. This statement excludes all war deaths except those registered in this country. The number of persons married during the year was 592,048.

The marriage-rate in England and Wales during the year 1924 was 15·3 per 1,000 of the estimated population at the middle of the year, the birth-rate 18·8 per 1,000, and the death-rate 12·2 per 1,000. Infant mortality was 75 per 1,000 registered births. The birth-rate was the lowest recorded except during the war years 1917-19; the death-rate was 0·6 per 1,000 population, while the infantile mortality was 6 per 1,000 registered births above the respective rates recorded in 1923.

A statement of the birth-rate and an analysis of the mortality during the year in England and Wales, London, and in the groups of towns is given in Table X; and Table XI shows the birth-rate, death-rate (from all causes and from various causes), and infant mortality during the year in each of the Metropolitan Boroughs and 105 Great Towns.

METEOROLOGY.***OCTOBER.**

Unsettled rainy conditions prevailed generally throughout the month except for a few periods of fine drier weather. Up to the 4th the weather in the eastern counties was fine and sunny, most of the rainfall occurring in the west, but subsequently rain became general and high winds and gales occurred in south-western England. By the 12th drier conditions set in generally for a week and sunshine records of over 9 hours were registered on several days. During this period mist and fog occurred locally at night and in the early morning. Unsettled weather was renewed on the 18th and high winds and gales were experienced along the south-eastern coasts on the 22nd. Following a temporary improvement, the last few days of the month were mild and unsettled with heavy rain at times.

NOVEMBER.

Unsettled weather prevailed during the first two days of the month. Heavy rain, resulting in floods in many places, fell in the south with gales on the south-west coasts. Conditions subsequently became fair and there was much local mist or fog. Severe frost was experienced inland on the mornings of the 4th—6th. Under the influence of southerly winds the weather was mild during the next few days with rain in the west and heavy local rain in the south of England on the 12th. While unsettled weather continued in the north, fair quiet weather prevailed in the south from the 13th to the 20th. Temperature fell and there was much local morning fog. During the remainder of the month bad weather with strong wind and frequent rain occurred generally.

DECEMBER.

Unsettled warm conditions with frequent strong winds and gales during the second half characterised the weather of the month. Temperature was generally high, maximum readings of over 57°F. being recorded on several days. Fog and mist were very prevalent. Widespread fog occurred on the 10th and 11th, being particularly dense in eastern and south-eastern England. Low maxima were registered on these days, the thermometer at Wisley and Wallington not rising above freezing point on the 10th. Sunshine was above normal except in north-east England. Thunderstorms occurred sporadically on several days and snow fell at a few places towards the end of the month.

* Furnished by the Director of the Meteorological Office.

* Excluding non-civilians.

† The populations except that of Belfast which relates to civilians only are total populations and relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

TABLE X.—**Birth-rate, Death-rate, and Analysis of Mortality** during the year 1924.

(Provisional figures. The rates for England and Wales have been calculated on a population estimated to the middle of 1924, while those for the towns have been calculated on populations estimated to the middle of 1923. The mortality rates refer to the whole population as regards England and Wales, but only to civilians as regards London and the groups of towns.)

	BIRTH-RATE PER 1,000 TOTAL POPULA- TION.	ANNUAL DEATH-RATE PER 1,000 POPULATION.										RATE PER 1,000 BIRTHS.		PERCENTAGE OF TOTAL DEATHS.		
		All Causes.	Enteric Fever.	Small-pox.	Measles.	Scarlet Fever.	Whooping Cough.	Diphtheria.	Influenza.	Violence.	Diarrhoea (under Two years).	Total Deaths under One year.	Causes of Death certi- fied by Registered Medical Practitioners.	Inquest Cases.	Uncertified Causes of Death.

* Excluding non-civilians

* Excluding non-civilians.

† The births for London and the Metropolitan Boroughs are the net numbers registered in the calendar year after correction for inward and outward transfers. The rates per 1,000 births based on deaths in the 53 weeks have therefore been adjusted for this difference of period.

† Including 6 deaths from small-pox.

* Excluding non-civilians.

+ The populations except that of Belfast are total populations and relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland, and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar year.

† Deaths from Small-pox are included as follows :—Greater London, 3 ; Outer Ring, 3 ; 16 Great Towns, 3 ; and Middlesbrough C.B., 2.

* The hours of observation are 9 a.m. and 9 p.m. local time.

† The normals used are obtained from observations extending over 35 years (1881-1915).

Pressure is expressed in millibars (1000 mb. = 29.531 mercury-inches). Wind Force.—The Summary is obtained from the records of a cup anemograph having 5 in. cups and 15 in. arms. The factor used is 8. Winds above 43 miles per hour are reckoned as gales and winds between 21 and 43 miles per hour as moderate or strong winds. Directions are not tabulated when the

† A day is reckoned as "generally clear" if the average of the estimates of the fraction of sky covered by cloud at 9 a.m., 3 p.m., and 9 p.m. is less than .2, and as "generally overcast" if the average is greater than .8. Days persistently cloudless and days persistently overcast refer to the period midnight to midnight.

Table XV.—BIRTHS and DEATHS in LONDON and in certain CITIES in the BRITISH EMPIRE and FOREIGN COUNTRIES, (53 weeks).

Note.—The figures in this table are compiled from the weekly returns.

CITIES.	POPULATION (estimated).*	Births (exclud- ing stillborn).	Birth - rate per 1,000.	Deaths (exclud- ing stillborn).	Death - rate per 1,000.	Deaths of Infants under 1 year of age.	Rate to 1,000 Births.	PRINCIPAL EPIDEMIC DISEASES.

* These populations relate, as far as possible, to the middle of the year. They differ in some cases from those in Table VII.

† The estimated population and deaths for London refer to the civilian population only.

‡ Including deaths from croup in Paris, Amsterdam, Copenhagen, the German cities, and Warsaw.

** The deaths in this column relate to all ages for Madras, and Oslo (Christiania), and to children under 1 year of age for Copenhagen, Stockholm, Gothenburg, and the German cities.

§ Including 365 deaths from plague in Bombay and 33 in Calcutta, and from Asiatic Cholera 31 in Bombay, 1,227 in Calcutta and 90 in Madras.

¶ The Registration of Births in Bombay is incomplete.
